Window Shadings

Installation • Operation • Care

Battery Powered Motorized System
Product View

- Installation Brackets
- Battery Wand Clips
- Battery Wand Cable
- Battery Wand
- Top Limits
- Magnetic Hold-Down Bracket (Optional)
- Weight Clip
- Bottom Rail Balance Weight
- Back of Motor Cartridge
- 2-Pin Port (Power)
- 3-Pin Port
- Antenna
- Fabric-Covered Headrail (Optional)
- Manual Control Button and Infrared Eye
- Weight Clip
Thank you for purchasing window shadings with the Battery Powered motorized system. With proper installation, operation, and care, your new shadings will provide years of beauty and performance.

Please thoroughly review this instruction booklet and the packing list before beginning the installation. For information regarding operation and programming, refer to the guide included with your remote control.

**Tools and Fasteners Needed**

- Flat blade and Phillips screwdriver
- Level (laser level is recommended)
- Measuring tape and pencil
- Power drill, \(\frac{3}{32}"\) drill bit, and \(\frac{1}{4}"\) hex driver

In addition, you will need fasteners designed to work with your specific mounting surface(s).

- **#6 Hex Head Screws (Provided).** Two 1\(\frac{1}{2}"\) screws are provided per installation bracket.
- **Longer Hex Head Screws (Not Provided).** If using spacer blocks, use #6 screws long enough for a secure attachment.
- **Speed Nuts and Screws (Provided).** Extension brackets come with screws and speed nuts.
- **Drywall Anchors (Not Provided).** Use drywall anchors when mounting into drywall.
Installation Overview

To install your shading, you will need to perform the following three steps:

**STEP 1:** Install the Brackets
**STEP 2:** Install the Shading
**STEP 3:** Connect the Power Source

**STEP 1 — Install the Brackets**

- The required number of installation brackets varies with shading width, as shown in the table.

<table>
<thead>
<tr>
<th>Width</th>
<th>Brackets Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>12” – 36”</td>
<td>2</td>
</tr>
<tr>
<td>36½” – 79”</td>
<td>3</td>
</tr>
<tr>
<td>79½” – 96”</td>
<td>4</td>
</tr>
<tr>
<td>96½” – 120”</td>
<td>5</td>
</tr>
</tbody>
</table>

**Mounting Types and Window Terminology**

If the installation brackets are mounted correctly, the rest of the installation process follows very easily. To prepare for this important first step, review the mounting types and basic window terminology illustrated below.

- Refer to the appropriate page below based on the mounting type chosen for your order:
  - **Inside Mount** — Page 4
  - **Outside Mount** — Page 6
  - **End Mount** — Page 8
Inside Mount

- Measure and mark end bracket locations 2” in from each jamb.

  - If more than two installation brackets are required (see table on page 3), mark the location of additional bracket(s) spaced evenly between the two end bracket locations. Mount into wood whenever possible. **Allow a minimum of 18” from the motor side for the battery wand.**

  ![Shadings with Battery Wand](image)

- Determine whether or not to remove any tabs from the installation brackets.

  - If using a **back cover**, use pliers to remove **both** tabs from the installation brackets.

  - If using a battery wand **without** a back cover, leave both tabs on the brackets. The top tab ensures that there is clearance for the wand.

  - If using a satellite battery pack or DC power supply **without** a back cover, use pliers to remove the **top** tab.

  - Save any removed top tabs for use as shims when needed.
Choose which set of holes works best in your application. Mark the screw holes.

- The minimum depth required for mounting is 2" with a battery wand and a back cover.
- Minimum depth is 1 ¼" with a satellite battery pack and back cover.
- Refer to the chart below for fully recessed depth requirements.

**IMPORTANT:** The front edges of the installation brackets must be level and aligned.

**WARNING:** Failure to properly align the brackets could result in the headrail releasing from the brackets.

Drill the screw holes using a ⅜" drill bit.

**IMPORTANT:** Use drywall anchors when mounting into drywall.

Use a level to check that the mounting surface is level. If necessary, you can shim the brackets using the top tabs that were removed from the brackets.

If you ordered a back cover, attach the back cover brackets to the installation brackets.

- If a satellite battery pack or DC power supply is used, first remove the **top tab** from the back cover bracket.
- Snap the prongs on the back cover brackets into the holes on the back of the installation brackets.

Attach the installation brackets using the screws provided.

**IMPORTANT:** Do not overtighten the screws. After mounting the installation brackets, check that the bracket release lever can be moved easily side to side. If it does not move easily, loosen the screws 1/8 turn and check again. Repeat until the lever moves easily.

---

**Fully Recessed Mounting Depths**

<table>
<thead>
<tr>
<th></th>
<th>Headrail</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery Wand &amp; Back Cover</td>
<td>4&quot;</td>
</tr>
<tr>
<td>Satellite Battery Pack or DC Power Supply &amp; Back Cover</td>
<td>3⅓&quot;</td>
</tr>
</tbody>
</table>

---

Proceed to “STEP 2 — Install the Shading” on page 9.
Outside Mount

- Center the headrail over the window opening at the desired height. Use a pencil to lightly mark each end of the headrail.
  - Alternatively, measure the width of the headrail and use that width to mark the headrail end points over the window opening.

- Mark 2” in from each of the headrail end marks.
  - If more than two installation brackets are required (see table on page 3), mark the location of additional bracket(s) spaced evenly between the two end bracket locations. Mount into wood whenever possible. **Allow a minimum of 18” from the motor side for the battery wand.**

- Use pliers to break off both removable tabs from the installation brackets.
  - Save any removed top tabs for use as shims when needed.

- Center the installation/extension brackets on your marks and mark the location of the screw holes.
  - The top of the installation brackets should be aligned and level at the desired height of the shading.
  - If using extension brackets, center an extension bracket on your marks and mark the location of the screw holes.
  - A minimum 1” flat vertical surface is required to mount the installation or extension brackets.

**CAUTION:** The rear of the brackets or spacer blocks must be flush against a flat mounting surface. **Do not mount brackets on curved molding.**

- Drill the screw holes using a \( \frac{3}{32} \)" drill bit.

**IMPORTANT:** Use drywall anchors when mounting into drywall.
Attach the installation brackets using the screws provided.

**IMPORTANT:** If using a battery wand, use a minimum of one 1/2" and one 1/4" spacer blocks per installation bracket to provide the clearance required for the battery wand and battery wand bracket.

- The solid side of the spacer blocks faces the mounting surface.
- Attach the spacer blocks with the installation bracket using two screws long enough for secure mounting.
- Use a maximum of three 1/2" spacer blocks per installation bracket.

If using extension brackets, attach them to the mounting surface. Then attach an installation bracket to the underside of each extension bracket using the provided screws and speed nuts.

---

Proceed to “STEP 2 — Install the Shading” on page 9.
End Mount

End mount the headrail when conventional mounting techniques will not work — for example, in an arched window opening.

- Use pliers to break off both removable tabs from the installation brackets.

If you ordered a back cover, attach the back cover brackets to the installation bracket.

- If a satellite battery pack or DC power supply is used, first remove the **top tab** from the back cover bracket.
- Snap the prongs on the back cover brackets into the holes on the back of the installation brackets.

Mount extension brackets to each side of the opening at the desired height of the shading.

- The mounting surface must be vertical and flat, not part of an arched curve.
- Minimum mounting surface width with a built-in battery wand is 2\(\frac{1}{8}\)".
- Minimum mounting surface width with a satellite battery pack or DC power supply is 1\(\frac{1}{2}\)".

- Attach the installation brackets to the extension brackets using the provided screws and speed nuts.

Proceed to “STEP 2 — Install the Shading” on page 9.
STEP 2 — Install the Shading

CAUTION: Take care when handling the antenna wire attached to the motor cartridge. **Do not cut or remove this antenna.**

- If you have an external eye, plug it into the 3-pin port on the back of the shading. Be sure the plug is oriented correctly. **Do not force** the connection.

- If you purchased the fabric-covered headrail (optional), peel back the protective covering from the top of the headrail. Leave the rest of the protective covering on the front of the headrail until the shading is installed.

- Position the shading so that the front (colored fabric) faces you.

- Slide the headrail into the installation brackets so the edge of the headrail is between the lever and the bracket, as shown.

- Firmly push the headrail into each bracket until it clicks and the lever snaps to the right side of the bracket.

**IMPORTANT:** Carefully pull on the headrail at each bracket to ensure it is installed securely.

Enhance the Antenna Reception

- Carefully unsnap the antenna from its storage position on the motor cartridge and form it to hang straight down from the shading. This helps increase the signal range for the remote.
INSTALLATION

If You Have an Optional External Eye (Infrared Only)...

The plastic of the external eye can be painted. Do not paint the infrared eye.

CAUTION: Handle the external eye carefully to avoid damaging the infrared eye. Do not touch or push the infrared eye.

- Choose a location where the infrared signal from the remote is not obstructed. Check that the wire is not caught or pinched in the brackets or headrail.

IMPORTANT: For infrared operation, do not mount the external eye in direct sunlight or bright, focused light from halogen or fluorescent light fixtures, track lighting, spotlights, or neon lights.

- Break off the back cover from the snap-on front cover.
- Place the back cover at the desired location.
- Mark the screw hole.
- Drill the screw hole using a 3/32” drill bit.
- Attach the back cover using the screw provided.
- Place the infrared eye into the back cover with the eye facing out.
- Snap on the front cover with the hole placed over the infrared eye.

If You Have an Optional Dust Cover (For Outside Mount Shadings)...

The dust cover is used to protect the top of the headrail from exposure to dust on outside mounted shadings.

- Cut the dust cover to desired width.
- Remove the paper backing on one side of the hook and loop fastener dots.
- Apply the dots to the installation brackets on each end of the shading.

- Remove the remaining paper backing from the dots.
- Center the dust cover over the top of the shading, above the previously placed dots.
- Press the dust cover down onto the dots.
STEP 3 — Connect the Power Source

Refer to the appropriate page based on your order.

- For a battery wand or satellite battery pack, see below.
- For an optional DC power supply, see page 13.
- For an optional DC power supply with daisy-chain connections, see page 14.

If You Have a Battery Wand or Satellite Battery Pack...

Install the Batteries into the Battery Wand

- Squeeze the cap latch to release the cap.
- Remove the cap from the battery wand.
- Install the batteries according to the instructions on the battery wand label.
  - AA alkaline batteries are recommended for use with the Battery Powered shadings. These will provide approximately one year of operation, depending on usage. Lithium and rechargeable batteries are not recommended.
- Replace the cap.
  - Align the tab with the end of the wand.
  - Press the cap on until it latches.

IMPORTANT: If you have a satellite battery pack, proceed to “Mount the Satellite Battery Pack” on page 12.

Mount the Battery Wand into the Battery Wand Clips

- Place the battery wand with its socket toward the motor end of the shading.
- Push the battery wand straight up into the battery wand clips until it snaps into place. Check to make sure the battery wand is secure.

CAUTION: Be sure the cables do not become pinched by the battery wand clips during installation. Damage or overheating of components could result.
INSTALLATION

Plug the Power Cable into the Battery Wand

- From the back of the shading headrail, connect the power cable (from the motor side) into the socket on the battery wand.

Install the Back Cover (Optional)

- If using a back cover, install it into the back cover brackets, as shown.

Proceed to “Attach Magnetic Hold-Down Brackets (Optional)” on page 15 or “Operate the Shading” on page 16.

If You Have a Satellite Battery Pack...

Mount the Satellite Battery Pack

- Decide where you want to mount the bracket. A satellite battery pack may be mounted in any orientation.
- Mark the screw holes.
- Drill the screw holes using a $3/32"$ drill bit.
- Remove the backing from the double-sided tape. Press the bracket into place.
- Attach the bracket using the screws provided.
- Position the battery wand so the power cable is easily connected to the socket.
- Snap the battery wand into the bracket.

- Replace the cover with the slot aligned to the socket in the battery wand.
Plug the power cable from the shading into the extension cable.

Plug the other end of the extension cable into the socket in the battery wand.

**Install the Back Cover (Optional)**

- If using a back cover, install it into the back cover brackets, as shown.

Proceed to “Attach Magnetic Hold-Down Brackets (Optional)” on page 15 or “Operate the Shading” on page 16.

---

**If You Have a DC Power Supply...**

**Connect the Power Supply**

- Plug the power cable from the shading into the extension cable.
- Plug the other end of the extension cable into the DC power supply.
- Plug the DC power supply into a standard outlet.
- Secure the power supply cable using wire retainers (not supplied). If hiding the cable behind the shading, make sure it does not impede the operation of the shading.
- Space the wire retainers approximately 15" apart along the power supply cable, as shown.

**WARNING:** Keep cords and small parts out of the reach of children. They can wrap cords around their necks and **STRANGLE**. They can also put small parts in their mouths and **CHOKE**.

**WARNING:** Electric shock and/or a fire hazard may occur, if not properly installed.

**Install the Back Cover (Optional)**

- If using a back cover, install it into the back cover brackets, as shown.

Proceed to “Attach Magnetic Hold-Down Brackets (Optional)” on page 15 or “Operate the Shading” on page 16.
If You Have a DC Power Supply with Daisy-Chain Connections...

The daisy-chain feature allows up to three Battery Powered shadings to be powered by a single DC power supply. However, each shading has its own receiver eye and can operate independently. The daisy-chain feature is only available with the DC power supply option.

- Route the power cables from each shading to the connector, using an extension cable, if necessary.

- Plug an extension cable into the connector and the DC power supply. Two extension cables and two connectors are used for three shadings.

Proceed to “Attach Magnetic Hold-Down Brackets (Optional)” on page 15 or “Operate the Shading” on page 16.
Attach Magnetic Hold-Down Brackets (Optional)

- Lower the shading, keeping the vanes closed.
- Place the magnetic hold-down brackets onto the bottom rail just inside the end caps, oriented as shown.
- Hold the brackets while opening and closing the vanes. (It may be necessary to have someone assist you.) Adjust the brackets to the best overall position.
- Mark the screw locations using one of the mounting options shown below.

  - The screw should be placed in the middle of the channel. This will allow for adjustment.

**Outside Mount**

![Preferred](preferred_outside.png) ![Alternate](alternate_outside.png)

**Inside Mount**

![Preferred](preferred_inside.png) ![Alternate](alternate_inside.png)

- Drill the screw holes using a 3/32" drill bit.
- Attach the hold-down brackets to the mounting surface using the screws provided.
- If necessary, adjust the bracket position using the channel for best operation.
OPERATION

Operate the Shading

Test the Shading Using the Manual Control Button

Testing the shading with the manual control button will allow you to ensure that the motor and power source are working correctly.

Press the manual control button on the bottom of the motor side end cap to test operation. If the shading does not operate, see “Resetting the Shading” on page 18 or refer to “Troubleshooting” on page 19.

Press the button to alternately lower, stop, and raise the shading.

**CAUTION:** When raising the shading for the first time, observe how the fabric rolls up into the headrail. It should roll up evenly. If the bottom rail is not level or the shading starts to rub against either window jamb, immediately press the manual control button to stop the shading. See “Adjust the Bottom Rail Weight” on page 22.

Further Operation and Programming Information

Remote Operation

For information regarding operation and programming of the remote control, refer to your *Remote Control Guide.*
Alternate Push-Button Programming Method (Professional Installation Only)

To Add a Shading to a Group:

- Press and hold the manual control button located at the window covering or on the external eye.
- While continuing to press the manual control button, press the desired group number button, then press the OPEN button on the remote.
- The window covering will move slightly to indicate it has been assigned to a group.

To Remove a Shading from a Group:

- Press and hold the manual control button located at the window covering or on the external eye.
- While continuing to press the manual control button, press the desired group number button, then press the CLOSE button on the remote.
- The window covering will move slightly to indicate it has been removed from that group.
OPERATION

Resetting the Shading

If you need to reset the limits:

**Basic Reset**

- Press and hold the manual control button for 6+ seconds. The shading moves slightly up and down *once* to indicate that it has been reset. Release the button.

- Press and release the manual control button to close the shading completely. This sets the lower motor limit.

- Press and release the manual control button again to open the shading completely. This sets the upper motor limit.

**Factory Reset (Professional Installation Only)**

To clear all stops, erase all radio frequency (RF) programming, and reset the shading to factory default:

- Press and hold the manual control button for 12+ seconds. The shading moves slightly up and down *twice* to indicate that it has been reset. Release the button.

- Press and release the manual control button to close the shading completely. This sets the lower motor limit.

- Press and release the manual control button again to open the shading completely. This sets the upper motor limit.

**NOTE:** Both upper and lower motor limits have been reset. However, any intermediate stop position is still cleared; and all RF programming has been erased and will need to be set up again.
Troubleshooting

If your shading is not operating correctly:

- First review the guide that came with your remote control.
- Refer to the following troubleshooting procedures for specific solutions for your shading.

<table>
<thead>
<tr>
<th>Problem</th>
<th>The shading will not fit into the installation brackets.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solution</td>
<td>Check that the installation brackets are level and aligned. Adjust and/or shim to level, if necessary.</td>
</tr>
<tr>
<td></td>
<td>Be sure the heads of the mounting screws are flush against the installation bracket.</td>
</tr>
<tr>
<td></td>
<td>Make sure that the shading fabric is not caught between the installation bracket and the headrail.</td>
</tr>
<tr>
<td></td>
<td>Check that the headrail is completely inserted into the installation brackets. See “STEP 2 — Install the Shading” on page 9.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Problem</th>
<th>The shading is not responding to the remote.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solution.</td>
<td>Check that the batteries in the wand or satellite battery pack are correctly inserted and are fresh.</td>
</tr>
<tr>
<td></td>
<td>Check that the battery wand, satellite battery pack, or DC power supply is securely connected to the power cable and the cables are not pinched or caught in the headrail or installation brackets.</td>
</tr>
<tr>
<td></td>
<td>Reset the shading. See “Resetting the Shading” on page 18.</td>
</tr>
<tr>
<td></td>
<td>See the Remote Control Guide for operating or programming troubleshooting solutions.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Problem</th>
<th>The vanes do not open when the shading is first operated.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solution</td>
<td>Open and close the shading several times to help open the vanes. If necessary, gently pull down on the bottom rail.</td>
</tr>
<tr>
<td>Problem</td>
<td>Solution</td>
</tr>
<tr>

<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| The bottom rail does not raise or lower completely, or its location when fully lowered has changed over time. | The batteries may be low in the wand or satellite battery pack. Replace the batteries.  
Check that the battery wand, satellite battery pack, or DC power supply is securely connected to the power cable and the cables are not pinched or caught in the headrail or installation brackets.  
Check that there is clearance between the ends of the shading and the window casement on inside mounts.  
Check if the fabric rolls up evenly into the headrail. If not, see “Adjust the Bottom Rail Weight” on page 22.  
Reset the stop positions. See “Resetting the Shading” on page 18.  
See the Remote Control Guide for operating or programming troubleshooting solutions. |
| Adjacent shadings do not roll up evenly. | It is considered normal if the roll-up on both shadings is within 5/16” of each other. If one shading rolls up tighter than another, lower and raise both shadings several times.  
Reset the shading. See “Resetting the Shading” on page 18.  
Check that the shading fabric is not catching on any brackets or components.  
Check that the fabric winds evenly and does not rub against the headrail. If uneven, see “Adjust the Bottom Rail Weight” on page 22.  
For a more exact roll-up, use the intermediate stop feature to set a specific height. See the Remote Control Guide for operating or programming troubleshooting solutions. |
| The shading raises or lowers unevenly or the bottom rail is uneven when fully raised. | Check that the headrail and installation brackets are level and aligned in the window. Level the headrail by shimming the installation brackets, if necessary.  
Make sure that the shading fabric is not caught between the installation bracket and the headrail.  
Adjust the bottom rail weight. See “Adjust the Bottom Rail Weight” on page 22. |
<table>
<thead>
<tr>
<th>Problem</th>
<th>The vanes do not close fully when the shading stops in the lowest position.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solution</td>
<td>The shading should be programmed to stop in its lowest position with the vanes closed. A small distance between the front and back fabric facings in the fully closed position is normal.</td>
</tr>
<tr>
<td></td>
<td>- If this distance is excessive or moves over time, open the shading to its full “vane open” position and try again. If this does not correct the problem, reset the bottom limit.</td>
</tr>
<tr>
<td></td>
<td>- Reset the shading. See “Resetting the Shading” on page 18.</td>
</tr>
<tr>
<td></td>
<td>- See the Remote Control Guide for operating or programming troubleshooting solutions.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Problem</th>
<th>The front fabric appears to cling to the back fabric.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solution</td>
<td>Lightly apply a static spray for home furnishings. Follow the manufacturer’s directions.</td>
</tr>
<tr>
<td></td>
<td>Allow the shading to dry in the fully lowered position.</td>
</tr>
<tr>
<td></td>
<td>If necessary, reapply the static spray each time the shading is professionally cleaned.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Problem</th>
<th>The shading raises from the sill when the vanes are closed.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solution</td>
<td>A small gap between the sill and the bottom of the shading is normal in the fully lowered “vane closed” position. The gap is necessary to allow for the unimpeded movement of the bottom rail.</td>
</tr>
<tr>
<td></td>
<td>- If this gap is excessive or moves over time, open the shading to its full “vane open” position and try again. If this does not correct the problem, reset the bottom limit. See the Remote Control Guide for operating or programming troubleshooting solutions.</td>
</tr>
</tbody>
</table>
**Problem**  The fabric winds unevenly or starts to rub against one end of the headrail.

**Solution**  Check that the headrail and installation brackets are level and aligned in the window. Level the headrail by shimming the installation brackets, if necessary.  If the headrail is level and the installation brackets are aligned, adjust the bottom rail weight as described below.

**Adjust the Bottom Rail Weight**

- Flip up the bottom rail to access the bottom rail weight.
- To release the weight clip, insert a flat blade screwdriver into the weight clip and turn clockwise.
- Move the weight in 1" increments toward the side where the fabric is gathering.
- Lower the shading all the way and check that the bottom rail is level. Adjust the weight until the fabric winds evenly and does not gather on either side.
- Secure the weight clips in position by turning them counterclockwise after making the adjustment.
Removing the Shading

- Fully raise the shading.
- Disconnect the power source and the external eye from the power cable at the back of the shading.
- Move each lever of the installation brackets to the left to release the shading.

**CAUTION:** A flat blade screwdriver can be used to move the lever. Be very careful not to tear or damage the fabric.

- If the lever is inaccessible or inoperable, lower the shading until you can see the underside of the bracket. Carefully reach a small flat blade screwdriver behind the shading to the tab on the bottom of the bracket between the screw holes.
- Push the tab away from the shading and pull the headrail to release it from the bracket.

- Carefully pull the headrail to completely remove the shading from the brackets.

Cleaning Procedures

Window shadings are made of 100% polyester, which means they are inherently durable and resilient. However, care must be taken to avoid wrinkling the fabric, particularly where the vanes meet the facings.

**Fabric-Covered Headrail (Optional)**

- Spot-clean the headrail using a sponge or delicate cloth, cool distilled water, and a mild soap solution; handle with care as you would any fine fabric.

**Dusting**

- Regular light dusting with a feather duster is all the cleaning that is needed in most circumstances.

**Vacuuming**

- Use a low suction, hand-held vacuum for more thorough dust removal.
CARE

Compressed Air/Hair Dryer (Cool Setting)
- Blow dirt and debris from within the fabric folds using clean, compressed air or a hair dryer set on a cool setting.

Spot-Cleaning
**IMPORTANT:** Do not spot-clean anything other than the fabric-covered headrail on the window shadings.
- Prepare a solution of warm water and mild detergent.
- Dampen a clean cloth in the solution and wring it out.
- Dab the spot with the dampened cloth until the spot is gone.
- Allow the fabric-covered headrail to dry.

Ultrasonic Cleaning
Window shadings can be ultrasonically cleaned by a professional.
- Specify that a mild detergent solution be used.
- Never immerse the headrail in the solution.
- Dry the shading completely in the lowered position.

Injection/Extraction
Window shadings can be professionally cleaned using the injection/extraction method.
- A dry method of injection/extraction is required for all fabrics.
- Never immerse the headrail in the solution.

Electrostatic Cleaning
Do not use electrostatic cleaning wipes on any window shadings.

A Note About Fabrics
As with all textiles, fabrics are subject to some variations. Slight wrinkling, puckering, or bowing is inherent to this textile product and should be considered normal, acceptable quality. These characteristics are not usually visible from the front or rear but may be visible from a side angle. Precautions should be taken to reduce exposure to harsh environmental elements, such as salt air. Continuous exposure through open windows and doors will accelerate fabric deterioration.
LIMITED LIFETIME WARRANTY

Congratulations on Your Selection of a Custom Window Covering.

Because we take pride in our workmanship and quality that goes into every one of our products, we back our products with this:

Limited Lifetime Warranty Covering Our Custom Made Window Coverings

We extend this limited lifetime warranty to the original purchaser. This warranty applies only to battery powered Custom Products properly installed in the window, door or interior area for which they were intended.

Installation of the product must be in accordance with the accompanying instructions. The product cannot be modified. It is the purchaser's responsibility to maintain and clean the product in compliance with the instructions provided. The product must be used only in the window for which it was purchased.

This warranty covers our product for defects in materials, mechanisms, workmanship, or failure to operate properly. Operational cords are warranted for 5 years from the date of purchase.

Any conditions caused by damage to the product resulting from misuse, abuse, direct exposure to salty air or discoloration due to sunlight or the passage of time are NOT covered by this warranty.

This warranty does not apply to conditions caused by normal wear and tear upon this product.

This warranty is exclusive and in lieu of all other obligations, liabilities or warranties. In no event shall we be liable for INCIDENTAL or CONSEQUENTIAL DAMAGES or any other direct or indirect damage, loss, cost, expense or fee. Some states do not allow the exclusion or limitation of incidental or consequential damages, so this exclusion or limitation may not apply to you.

In the event of a defect under this warranty, we will repair or replace the product, at our option, provided it is returned to an authorized dealer.

Our warranty excludes shipping charges and labor costs for removal, measuring and installation. Repairs will be made with like or similar parts.

This warranty gives you specific legal rights, and you may also have other rights, which may vary from state to state.

NOTES: Specialty Shadings are warranted for one year from the date of purchase. Motorized Systems are warranted for five years from the date of purchase.

This warranty does not apply to commercial orders.
